### Abstract of DE19606433

The device uses a pneumatic or hydraulic pressure medium for applying a treatment product in the form of a cream, a liquid, or a gas to the required skin area via an application jet (135). The pressure of the pressure medium can be adjusted between 0 and 8 bar in a number of discrete steps, with the treatment product mixed with the pressure medium, or applied to the skin before application of the jet.
